LAUNCHCODE PROJECT HIGHLIGHTS

Web Caesar Project
Language: Python
Tools: Flask, Git
- Coded a simple web application that prompts a user to submit a string and an integer.
- Once submitted, the program rotates each string character by the provided integer and outputs an encrypted string.

User Signup Project
Language(s): Python, HTML
Tools: Flask, Jinja2 Template Engine, Git
- Coded a user signup form that requires client-side validation for username, email, and password.
- Incorporated error messages and Jinja2 templates that render based on the condition of validation submissions.

Blogz Project
Language(s): Python, HTML , SQL
Tools: Flask, Git, Jinja2 Template Engine, MySQL, Bootstrap
- Coded a fully functional multi-user blog application with a front-end interface and database storage capabilities.
- Includes the ability for multiple users to log in, log out, submit a new blog, view all blog posts held in the database, and view only blog posts written by a specific user.

PROFESSIONAL EXPERIENCE

Knowledge Manager, *DST Systems*
2016 - Present
- Manage Atlassian Confluence intranet web content and Neocase Knowledge Management system for international company with over 10,000 employees.

Project & Document Manager, *Agspring*
2015 - 2016
- Project managed the collection, review, and analysis of due diligence documents for mergers and acquisitions.
- Collaborated with all departments to configure SharePoint sites, define information architecture, and define document management strategy.

Regional Enrollment Manager, *Assurant Employee Benefits*
2010 - 2015
- Held various positions of increasing scope beginning with a sales support role leading to promotions in project leadership and ultimately management functions.
- As a Regional Enrollment Manager I managed a national cloud-based telephonic enrollment center including reporting, training, troubleshooting, and expansion strategy.
